Thank you for your purchase.

By running your own node, you enjoy financial independence and privacy while supporting Bitcoin's decentralization.

Nakamochi is your personal plug-and-play node for the Bitcoin and Lightning Network. It operates independently, requiring only Wi-Fi and power - no computer needed. Control your node easily via the touchscreen and a mobile app. You can also connect other devices, such as those of family members or co-workers, to your node.

Box contents: Nakamochi 1.0, USB-C cable & Ferrite, power adapter, board magnet, getting started leaflet & *important savety and usage instructions* leaflet in various languages. **Please read these carefully**. Note: The ferrite core has to be placed on the device side.

Getting started

1. **Plug it in & connect to Wi-Fi**

2. Click on the **"Setup New Wallet"** button in the *Lightning* tab. Store your **24-word recovery phrase** securely and away from your Nakamochi. **Important: The seed phrase is displayed only once and cannot be recovered later. For your security, never save your seed phrase digitally.**

3. **Connect your device:** Use the QR code displayed on the screen to connect to **BitBanana** (Android) or **ZEUS Wallet** (iOS). To connect other devices, simply scan the QR code on the screen.

You're all set! In order to start using the Bitcoin Lightning Network for fast, low-cost transactions you have to open Channels. To learn more about the Lightning Network, visit **nakamochi.io**.
